▲Model 115-2 shown

The OCV Series 115 Solenoid Control Valve is designed to provide on/off or open/close control of fluids in response to an electrical signal. The valve consists of the basic OCV model 65 with solenoid-operated pilot. With the appropriate solenoid, the valve may be normally closed (energize to open) or normally open (de-energize to open).

SERIES FEATURES

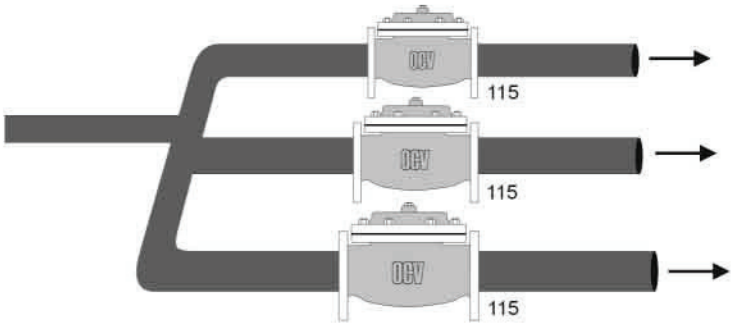
- The 115 Series provides responsive control in answer to such triggering devices as clocks, timers, relays, probes, pressure or temperature sensors.
- Available for AC or DC voltages.
- Wider range of sizes and flow capacity than is available with direct acting solenoid valves.
- Valves can be equipped with Manual Override solenoid operation.
- Solenoid feature can be added to other hydraulic control functions.

VALVE FEATURES

- Operates automatically off line pressure.
- Heavy-duty, nylon-reinforced diaphragm.
- Rectangular-shaped, soft seat seal provides drip-tight Class VI closure.
- Diaphragm assembly guided top and bottom.
- Throttling seat retainer for flow and pressure stability.
- Easily maintained without removal from the line.
- Replaceable seat ring.
- Alignment pins assure proper reassembly after maintenance.
- Valves are factory tested.
- Valves are serial numbered and registered to facilitate replacement parts and factory support.

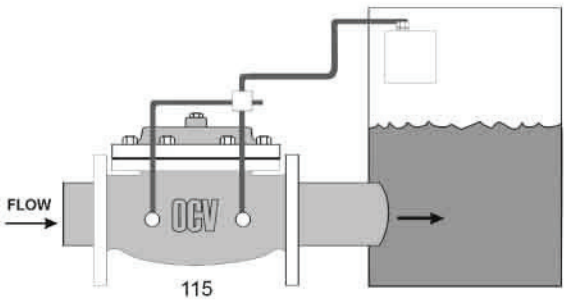
ZONE CONTROL

Used in irrigation and industrial processes, each flow line can be activated independently of others.



LEVEL CONTROL

Valve, activated by level sensor, fills storage tank.



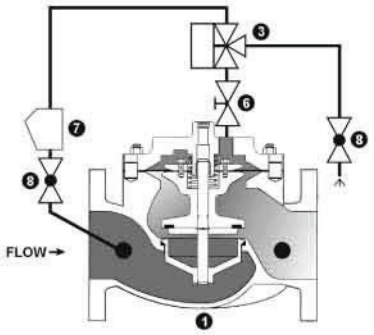
Solenoid Control Valve Series 115

VALVE OPERATION

SOLENOID VALVE TYPES

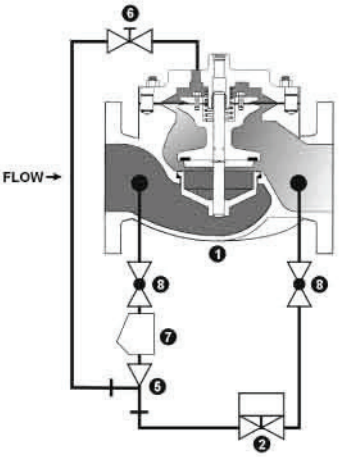
Model 115-1 Three-Way Solenoid

Operated by a 3-way solenoid. The main valve diaphragm chamber may be exhausted to atmosphere, allowing for full open operation at any flow rate. Standard with needle valve opening/closing speed control adjustment. Size ranges 1 ¼" - 4", consult factory on application of larger sizes.



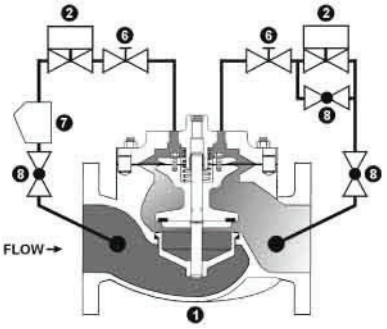
Model 115-2 Two-Way Solenoid

Operated by a 2-way solenoid and ejector. The main valve diaphragm is exhausted to valve outlet port. Valve position is determined by flow rate demand (differential pressure). Standard with needle valve opening/closing speed control adjustment. Size ranges 1 ¼" - 6", consult factory on application of larger sizes.



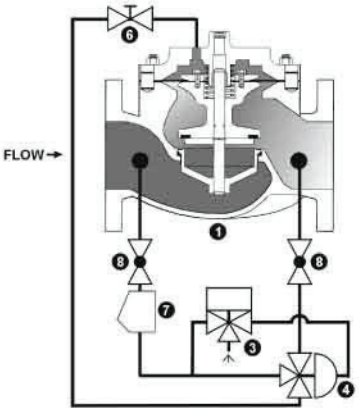
Model 115-3 Positioned Valve

Operated by two 2-way solenoids, the valve maybe positioned from full closed to full open or locked in any intermediate position. Equipped with both opening and closing speed adjustment. The valve can be configured to open, close, or hold position in the event of electrical power failure. The Model 115-3 is the basis for the OCV Series 22 and 88 Electronic Control Valves.



Model 115-4 Three-Way Solenoid With Accelerator

Operated by a 3-way solenoid which operates a large port accelerator pilot, allowing quick response on larger valves. Standard with needle valve opening/closing speed control adjustment. Size ranges 3 - 24".



Components

1. Basic Valve
2. 2-way solenoid
3. 3-way solenoid
4. 3-way auxiliary pilot
5. Ejector
6. Needle valve speed control
7. Y-strainer
8. Isolation ball valve

SIZING CONSIDERATIONS

Sizing of Series 115 Valves

Our ValveMaster selection and sizing software covers this in detail. However, if you do not have the software, sizing per the following procedure should result in satisfactory operation.

1. Decide whether a globe or angle valve will best fit your installation. Keep in mind that it is always best to install any control valve "bonnet up," particularly in sizes 8" and larger.

2. Begin with a line-sized valve.

   Calculate the pressure drop from the formula.

$$DP = sg\left(Q/C_V\right)^2$$

where: DP = pressure drop, psi
sg = specific gravity of line fluid (water = 1.0)
Q = rated flow of pump, gpm
Cv = Valve coefficient from the table below.

3. The pressure drop calculated is that for a wide-open valve and would be true for an exhaust-to-atmosphere valve (115-1 or 115-4) regardless of flow rate. On the other hand, a valve exhausting to downstream (e.g., 115-2) may not be wide open. Refer to the "wide open at" column of the table. If the flow rate is less than this figure, the pressure drop of the valve can be 2-3 psi higher than the value calculated in Step 2. If the flow rate is higher than the figure given, the valve will be wide open and will have a pressure drop equal to the exhaust-to-atmosphere valve.

4. Check to see that the flow velocity does not exceed 20 ft/sec. If it does, or if the pressure drop is excessive, consider using the next size larger valve.

5. Finally, if an exhaust-to-atmosphere valve is selected, make note of the diaphragm chamber discharge. This quantity of water will be discharged to atmosphere each time the valve opens or closes. Provision should be made to drain or otherwise dispose of this water.

FLOW CHARACTERISTICS

SIZE	C_V (GLOBE)	C_V (ANGLE)	FLOW @ 20 FT/SEC (GPM)	WIDE OPEN AT: (GPM)	DIAPH. CHAMBER DISCHARGE (GALLONS)
1 ¼	23	30	85	50	0.02
1 ½	27	35	120	50	0.02
2	47	65	210	100	0.05
2 ½	68	87	300	140	0.06
3	120	160	460	220	0.10
4	200	270	800	400	0.2
6	450	550	1800	950	0.6
8	760	1000	3100	1300	1.0
10	1250	1600	4900	2000	2.5
12	1940	2400	7000	2800	4.0
14	2200	--	8450	3300	6.5
16	2850	4000	11,000	4500	9.6
24	6900	--	25,000	9300	28.0

VALVE SELECTION GUIDE

This chart shows only a sample of those most often specified valves. Consult the factory for specific data on the model you selected.

Combination valves can often reduce or eliminate other equipment. Example: If the system requires a reverse flow check function, the check feature can be added as a function of the Solenoid Valve Series 115.

Feature	115-1	115-2	115-26	115-3	115-36	115-4	115-46	Definition
Two-Way Solenoid		X	X					Two-Way solenoid with ejector system
Check Feature			X		X		X	Closes valve on pressure reversal
Three-Way Solenoid	X							Three-Way solenoid operates valve directly
Three-Way Solenoid with Accelerator						X	X	Three-Way solenoid actuates high capacity pilot
Digital Modulation				X	X			Valve positioned via discrete electrical signals to two solenoids

ABOUT YOUR VALVE

OCV Control Valves was founded more than 50 years ago with a vision and commitment to quality and reliability. From modest beginnings, the company has grown to be a global leader just a half century later. In fact, OCV Valves can be found in some capacity in nearly every country around the world from fire protection systems in Malaysia to aircraft fueling systems in Africa and from oil refineries in Russia to water supply systems in the USA and Canada. You will also find our valves in irrigation systems in Europe, South America and the Middle East.

The original foundation on which the company was built allows our team of professionals to not only provide the service required to be a worldwide supplier, but more importantly the opportunity to afford the personal touch necessary to be each of our customers' best partner. Simply stated, we take pride in all that we do.

Committed to the work they do, our employees average over 15 years of service. This wealth of knowledge allows us to provide quality engineering, expert support, exacting control and the know-how to create valves known for their long life.

Being ISO 9001 certified means we are committed to a quality assurance program. Our policy is to supply each customer with consistent quality products and ensure that the process is right every time. Our valves meet and exceed industry standards around the world, including approvals by:

QUALITY SYSTEM REGISTERED TO ISO 9001 · NSF-ISR · UL · Factory Mutual System · WRAS APPROVED PRODUCT

All valves are not created equal. OCV Control Valves proves that day in and day out.
We stand behind our valves and are ready to serve your needs.

*GROOVED END NOT AVAILABLE IN DN32

For maximum efficiency, the OCV control valve should be mounted in a piping system so that the valve bonnet (cover) is in the top position. Other positions are acceptable but may not allow the valve to function to its fullest and safest potential. In particular, please consult the factory before installing 8" and larger valves, or any valves with a limit switch, in positions other than described. Space should be taken into consideration when mounting valves and their pilot systems.

A routine inspection & maintenance program should be established and conducted yearly by a qualified technician. Consult our factory @ **1-888-628-8258** for parts and service.

How to order your valve

When Ordering please provide:
Series Number - Valve size - Globe or Angle - Pressure Class - Screwed, Flanged, Grooved - Trim Material - Adjustment Range - Pilot Options - Special needs / or installation requirements.
